- Per the UN Registration convention, each launching state maintains a registry, and the UN maintains a registry.
- Assumption: Presumably the registry takes the form of a database....

- Multiple local databases (for each...nation, or nationally-authorized local authority)

Relevant questions:

- Who owns & manages the registries/databases?
- Data-sharing agreements? With whom?
- Links between local and global databases? If so, what form?
- What are the relevant privacy, property & security aspects?
- Besides the UN, are there, should there be, or will there be other global actors & registries/databases?
- Besides national registries (presumably government owned), are/should/will there be other local registries?
